

NEXT GENERATION DESIGN

# Minimal PIM. Maximum convenience.

Our second-generation PIM Shield® plastic snap-ins deliver a generational leap in installation ease, and PIM mitigation. Engineered for one-hand, tool-free operation, they enhance safety and site performance, securing cables firmly in place.

## Simple One-Handed Installation

Snap it on with a single hand for a firm fit - no tools, no fumbling. Snap-in retention tabs ensure everything clicks securely into place.

## Designed to Stay in Your Hand, Not Fall from It

Unlike the circular design of leading competitors, which can be easily dropped during installation, our ergonomic shape provides a secure grip.

## Expanded Cable Insertion Zone

A larger, nylon-flex insertion mouth accommodates a wider range of cable diameters and makes positioning effortless, even in tight or awkward spaces.

## Oversized Cable Guides for Anti-Slip Security

Broad, flared guides cradle the cable and stop it from sliding through, ensuring stable connections that endure wind, vibration, and movement.

## Effortless Removal vs. Competitor Struggle

Where alternative snaps jam, require force, and risk dropping at height, our Gen 2 design releases cleanly with one hand - no extra effort, enhanced safety, and zero damage.
