

Universal Fit. Zero PIM.

ConcealFab® PIM Shield® Universal Barrel Cushions bring all-polymer, metal-free support to cable runs where passive intermodulation cannot be tolerated. One unique cushion family spans hangers from 1/2 inch to 2-1/4 inch, simplifying both specification and field stocking across the network.

Metal-Free, PIM-Safe Construction

An all-polymer body removes the metal-to-metal contact that generates passive intermodulation, protecting RF performance on sensitive cable runs. The cushion stays dielectric end-to-end, with no plating to wear in and reintroduce PIM.

Universal Hanger Compatibility

A single cushion family covers 1/2 inch through 2-1/4 inch hangers, cutting the number of distinct parts crews stock and install. One shelf SKU spans the hanger range across the tower.

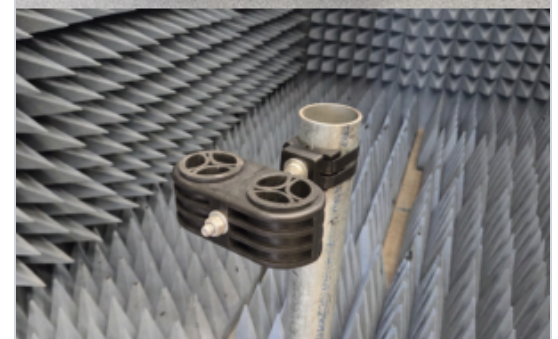

Unique Cushion Geometry

An internal web cradles the cable inside the barrel instead of pinching it against a flat wall, so the contact spreads across the cushion.

Field-Ready 10-Packs

Supplied in 10-packs and cased for volume deployment, sized for the way crews actually consume parts on site. The packaging keeps stock organized in the truck and makes per-tower part counts straightforward at handoff.

Built for Low-PIM Cable Management

- All-polymer, metal-free body
- Dynamic universal cushion design
- Fits 1/2" to 2-1/4" hangers
- Performance tested in our proprietary anechoic chamber
